Research Interests

Computer architecture, with particular emphasis on the design of efficient server systems. Most recently, my main focus has been on Machine Learning Accelerators, developing hardware techniques to enable fast and efficient implementations of deep learning, and making FPGA-based accelerators more practical and easier to program. More broadly, my work seeks to understand the fundamental properties and interactions of application software, operating systems, networks, processor microarchitecture, and datacenter dynamics, to enable software and hardware co-design of high-performance, power-efficient, and compact servers.

Education

Carnegie Mellon University

Pittsburgh, PA

Ph.D. in Electrical and Computer Engineering

June 2012

M.S. in Electrical and Computer Engineering

December 2002

B.S. in Electrical and Computer Engineering

December 2002

B.S. in Computer Science

May 2002

Honors and Awards

David R. Smith Young Scholar in Computer Science Award (2016-2020)

NSF CAREER Award (2015)

Graduate Teaching Award (2014)

Best Paper Award at the 11th International Conference on Virtual Execution Environment (VEE) for "A Comprehensive Implementation and Evaluation of Direct Interrupt Delivery."

IEEE Micro Top Picks from Computer Architecture Conferences of 2013, "A Case for Specialized Processors for Scale-Out Workloads."

Best Paper Award at the 17th International Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS) for "Clearing the Clouds: A Study of Emerging Scale-out Workloads on Modern Hardware."

Best Paper Finalist at the 17th International Symposium on High-Performance Computer Architecture (HPCA) for "Cuckoo Directory: A Scalable Directory for Many-Core Systems."

Paper Award from the European Network of Excellence on High Performance and Embedded Architecture and Compilation (HiPEAC) for "Cuckoo Directory: A Scalable Directory for Many-Core Systems."

IEEE Micro Top Picks from Computer Architecture Conferences of 2009, "R-NUCA: Data Placement in Distributed Shared Caches."

IEEE Micro Top Picks from Computer Architecture Conferences of 2009, "Practical Off-chip Meta-data for Temporal Memory Streaming."

2005 DARPA Grand Challenge driverless desert race, 2nd and 3d place autonomous vehicles for RedTeam.
